

Product name: SEB European Equity Small Caps

Legal entity identifier: 5299003MHF7KIZXQAT37

Environmental and/or social characteristics

Sustainable investment: means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: __ %

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: __ %

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 31.16% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the 2025 reference period, the Fund promoted environmental and social characteristics as follows:

Environmental Characteristics

- **By applying the Management Company's exclusion criteria:** The Fund excluded investments in companies operating in industries or areas that were deemed to face significant challenges concerning environmental sustainability.
- **By influencing companies' business models towards greater environmental sustainability:** On behalf of the Fund, the Management Company influenced companies by voting at general meetings, engaging in dialogues with management teams and boards, participating in nomination committees, and collaborating with other asset managers or partners.
- **By applying the management company's internal sustainability model, SIMS-S:** The Fund used SIMS-S both prior to making investments and as a shareholder to assess sustainability risks and opportunities that could impact the investment's risk, return, and environmental impact on society.
- **By making sustainable investments in companies that support one or more of the following UN Sustainable Development Goals (SDGs) with environmental objectives:**
 - **SDG 6:** Clean water and sanitation
 - **SDG 7:** Affordable and clean energy
 - **SDG 9:** Industry, innovation, and infrastructure
 - **SDG 11:** Sustainable cities and communities
 - **SDG 12:** Responsible consumption and production
 - **SDG 13:** Climate action
 - **SDG 14:** Life below water
 - **SDG 15:** Life on land
- **Climate change mitigation** by investing in companies with low emissions relative to the company's sector and geographical region.
- **Resource efficiency** by investing in companies assessed as outperforming in areas such as water usage, raw material consumption, or waste production relative to the company's sector and geographical region.

Social Characteristics

- **By applying the Management Company's exclusion criteria:**
The Fund excluded investments in companies operating in industries or areas that were deemed to face significant

challenges concerning social sustainability.

- **By influencing companies' business models towards greater social sustainability:**
On behalf of the Fund, the Management Company influenced companies by voting at general meetings, engaging in dialogues with management teams and boards, participating in nomination committees, and collaborating with other asset managers or partners.
- **By applying the Management Company's internal sustainability model, SIMS-S:**
The Fund used SIMS-S both prior to making investments and as a shareholder to assess sustainability risks and opportunities that could impact the investment's risk, return, and societal impact.
- **By making sustainable investments in companies that support one or more of the following UN Sustainable Development Goals (SDGs) with social objectives:**
 - SDG 1: No poverty
 - SDG 2: Zero hunger
 - SDG 3: Good health and well-being
 - SDG 4: Quality education
 - SDG 5: Gender equality
 - SDG 6: Clean water and sanitation
 - SDG 8: Decent work and economic growth
 - SDG 10: Reduced inequalities
 - SDG 11: Sustainable cities and communities
 - SDG 16: Peace, justice, and strong institutions

Additionally:

- **Gender equality**, by investing in companies that are more equitable relative to their sector and geographical region.
- **Gender equality, social inclusion, and diversity**, by investing in companies assessed through fundamental analysis to contribute to these objectives.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the 2025 reference period, the Fund committed to making sustainable investments amounting to a minimum share of 10.00%.

The proportion of the Fund's sustainable investments during the 2025 reference period amounted to 31.16%, based on a weighted average of the Fund's sustainable investments per quarter.

Sustainability objectives defined by the Management Company

Social Objectives

- At least 20% of the company's revenues are assessed to contribute to global social goals directly or indirectly linked to the following UN SDGs:
 - **SDG 1:** No poverty
 - **SDG 2:** Zero hunger
 - **SDG 3:** Good health and well-being
 - **SDG 4:** Quality education
 - **SDG 5:** Gender equality
 - **SDG 6:** Clean water and sanitation
 - **SDG 8:** Decent work and economic growth
 - **SDG 10:** Reduced inequalities
 - **SDG 11:** Sustainable cities and communities
 - **SDG 16:** Peace, justice, and strong institutions
- Companies outperform peers in the same region on gender equality metrics based on quantitative data.
- Companies demonstrate a high contribution to and exposure to social objectives based on fundamental analysis.

Environmental objectives (aligned with the EU Taxonomy)

- At least 10% of the company's revenues, capital expenditures, or operational expenditures are assessed or reported to significantly contribute to one or more of the six objectives in the EU Taxonomy:
 - Climate change mitigation
 - Climate change adaptation
 - Sustainable use and protection of water and marine resources
 - Transition to a circular economy, including waste prevention and increased use of secondary raw materials
 - Pollution prevention and control

- o Protection and restoration of biodiversity and ecosystems

Environmental objectives (not aligned with the EU Taxonomy)

- At least 20% of the company's revenues contribute to global environmental goals, directly or indirectly linked to the following UN Sustainable Development Goals (SDGs):
 - o **SDG 6:** Clean water and sanitation
 - o **SDG 7:** Affordable and clean energy
 - o **SDG 9:** Industry, innovation, and infrastructure
 - o **SDG 11:** Sustainable cities and communities
 - o **SDG 12:** Responsible consumption and production
 - o **SDG 13:** Climate action
 - o **SDG 14:** Life below water
 - o **SDG 15:** Life on land
- Companies outperform their sector and region in emissions metrics based on quantitative data.
- Companies outperform their sector and region in resource efficiency areas such as water usage, raw material consumption, or waste production based on quantitative data.
- Companies demonstrate a high contribution to and exposure to environmental objectives based on fundamental analysis.

The Management Company applies a "pass/fail methodology," where an entire investment is classified and reported as sustainable if it meets the requirement for contributing, social minimum safeguards, good governance, and avoiding significant harm.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that no sustainable investment caused significant harm to any environmental or social sustainability objective, the Fund undertook the following actions during the reference period:

- Excluded companies that did not comply with international norms and standards.
- Excluded companies operating in controversial sectors and business areas.
- Excluded companies with exposure to fossil fuels or other activities with a negative environmental impact (green bonds supporting energy transition or other energy-efficiency projects are allowed).
- Excluded companies deemed not to meet the levels of social safeguards as defined by the EU Taxonomy.
- Ensured good governance based on assessments from an external analysis partner regarding companies' governance structures, employment practices, tax compliance, and remuneration policies.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the 2025 reference period, the Management Company's model for identifying companies with extreme values among indicators for adverse impacts was utilised to avoid investing in companies that cause significant harm.

The indicators for adverse impacts on sustainability factors applied are those described in Annex I of the technical standards of the Disclosure Regulation (CDR 2022/1288), as well as relevant indicators in Tables 2 and 3 of Annex I to CDR 2022/1288. These indicators are dependent on the current availability of data. However, where sufficient data coverage existed, companies with significantly negative results in a geographical and sectoral context were excluded from being considered sustainable investments.

Some indicators were addressed through exclusions outlined in the Management Company's sustainability policy, which excludes:

- Companies operating in the fossil fuel sector;
- Companies with operations or facilities located in or near biodiversity-sensitive areas where their activities negatively impact these areas;
- Companies that fail to adhere to international norms and standards, such as the Ten Principles of the UN Global Compact and the OECD Guidelines for Multinational Enterprises;
- Companies involved in the manufacturing or sale of controversial weapons (e.g. landmines, cluster munitions, chemical, and biological weapons);
- Companies whose activities negatively affect endangered species.

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Fund's investments during the reference period were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the norm-based exclusion criteria outlined in the Management Company's sustainability policy.

Norm-based exclusions mean that the management company expects issuers to comply with international laws and conventions, such as:

- The UN Principles for Responsible Investment (PRI);
- The Ten Principles of the UN Global Compact;
- The OECD Guidelines for Multinational Enterprises;
- The UN Guiding Principles on Business and Human Rights, including the principles and rights established in the eight core conventions identified in the International Labour Organization's Declaration on Fundamental Principles and Rights at Work, and the Universal Declaration of Human Rights.

Companies with verified violations were excluded and, therefore, could not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

During the reference period, the Fund considered principal adverse impacts on sustainability factors through the exclusions described in the Management Company's sustainability policy, which excluded the following:

- Companies operating in the fossil fuel sector.
- Companies with facilities or operations located in or near biodiversity-sensitive areas where their activities negatively impact these areas.
- Companies that do not adhere to international norms and standards, such as the Ten Principles of the UN Global Compact and the OECD Guidelines for Multinational Enterprises.
- Companies involved in the production or sale of controversial weapons (landmines, cluster munitions, chemical, and biological weapons).
- Companies whose activities affect endangered species.

In the fundamental analysis process, sustainability assessments were conducted on various aspects of each company, including its products, services, operations, and suppliers. To support the evaluation of companies' sustainability risks and opportunities, the fund managers utilised the management company's proprietary sustainability model, **SIMS-S**.

Through the application of SIMS-S, the following indicators for adverse impacts were considered:

- Greenhouse gas (GHG) emissions from the companies in which we invest.
- The carbon footprint of the companies in which we invest.
- The GHG intensity of the companies in which we invest.
- The proportion of companies operating in the fossil fuel sector.
- Energy consumption intensity by sector with significant climate impact, for the companies in which we invest.
- Whether the companies in which we invest have operations or projects located in or near biodiversity-sensitive areas where activities negatively impact these areas.
- Water emissions generated by the companies in which we invest.
- The volume of hazardous waste generated by the companies in which we invest.
- Whether the companies in which we invest lack processes and compliance mechanisms to monitor adherence to the UN Global Compact's Ten Principles and the OECD Guidelines for Multinational Enterprises.
- The unadjusted gender pay gap within the companies in which we invest.
- Gender diversity on the boards of the companies in which we invest.
- Whether the companies in which we invest have initiatives to reduce carbon emissions with the goal of aligning with the Paris Agreement.
- Whether the companies in which we invest have a supplier code of conduct addressing unsafe working conditions, insecure employment, child labour, and forced labour.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1/1/2025-12/31/2025

The Fund's weights are calculated excluding cash and cash-equivalents, which is why the weights in certain cases may appear slightly elevated.

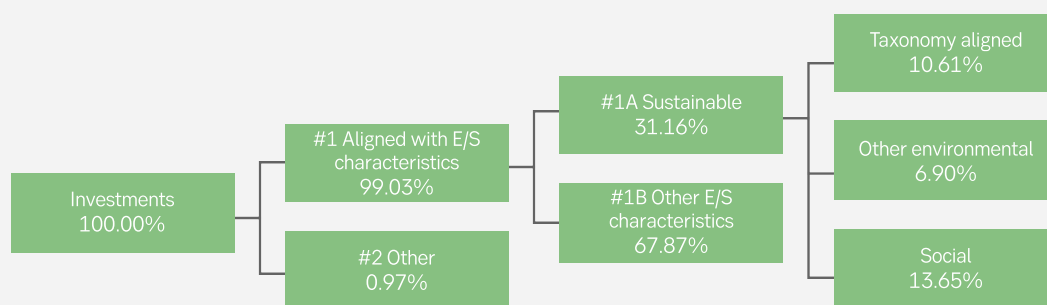

Largest investments	Sector	% of assets	Country
Chemometec A/S	Health Care	5.22	Denmark
Invisio Communications AB	Industrials	5.18	Sweden
Games Workshop Group PLC	Consumer Discretionary	4.79	Great Britain
Medicover AB	Health Care	3.72	Sweden
Reply SpA	Information Technology	3.21	Italy
ID Logistics Group	Industrials	3.16	France
Beijer Ref AB	Industrials	3.09	Sweden
Mensch und Maschine Software SE	Information Technology	3.04	Germany
Harvia Oyj	Consumer Discretionary	2.99	Finland
AAK AB	Consumer Staples	2.91	Sweden
Softcat PLC	Information Technology	2.82	Great Britain
Carel Industries SpA	Industrials	2.72	Italy
Medacta Group SA	Health Care	2.69	Switzerland
Medistim ASA	Health Care	2.68	Norway
Interpump Group SpA	Industrials	2.64	Italy

What was the proportion of sustainability-related investments?

The question is answered in the sub-questions below.

● What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

If present in the portfolio, sub-sectors related to fossil fuels, as defined in Article 2.62 Regulation (EU) 2018/1999, are disclosed. Otherwise, only top-level sectors are presented.

Sector	% assets
Materials	0.78
Industrials	24.08
Consumer Discretionary	14.03
Consumer Staples	3.78
Health Care	23.57
Financials	6.77
Information Technology	21.42
Communication Services	3.01
Real Estate	2.56

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The question is answered in the sub-questions below.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes
- in fossil gas in nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective — see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

During 2025, the share of investments in transitional activities was 0.15%. The share in enabling activities was 2.14%.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	Including sovereign bonds				Excluding sovereign bonds			
	2025	2024	2023	2022	2025	2024	2023	2022
Turnover	4.42%	5.33%	2.43%	0.10%	4.42%	5.33%	2.43%	0.10%
Capital expenditure	3.59%	7.69%	3.87%	0.00%	3.59%	7.69%	3.87%	0.00%
Operational expenditure	4.23%	7.65%	4.75%	-	4.23%	7.65%	4.75%	-

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

During the period, the Fund had a proportion of sustainable investments with an environmental objective that was not aligned with the EU Taxonomy amounting to 6.90%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

During the period, the Fund had a proportion of socially sustainable investments amounting to 13.65%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, the Fund utilised cash to manage liquidity and flows. The Fund did not consider any environmental or social safeguards necessary for these investments during the reference period

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Sub-Fund promoted environmental and social characteristics by including companies with clear sustainability profiles, as well as companies that are, or are likely to, benefit from regulations targeting environmental change.

One example is Swedish Logistic Property, a company that owns and operates logistic properties in Sweden. The company's business model involves acquiring properties with relatively low energy and cost efficiency and, through targeted energy-saving measures, improving the properties' energy performance. This leads to improved energy ratings and increased rental income. Reducing energy consumption benefits both society and the environment.

Another example is Bonesupport, a company that produces Cerament, a product proven to heal bone defects by remodelling them into host bone within six to twelve months. The product is used to treat fractures and bone voids caused by trauma, infection, disease, or related surgery. The usage of the product contributes to lower patient treatment costs, thereby benefiting society.

Active ownership is an integral part of the investment process, both to proactively influence companies towards greater sustainability and to reactively demand change from companies that do not meet the Management Company's expectations. Throughout the year, the Management Company influenced companies by participating in nomination committees and voting at annual general meetings. In many Nordic companies, the Management Company is one of the largest shareholders and maintains continuous dialogue with management teams and boards. Key focus areas during the year included remuneration and incentive programmes linked to sustainability factors, as well as increased reporting and transparency regarding companies' climate impact.

The Sub-Fund excludes companies that fail to meet the Management Company's sustainability criteria. This is ensured through the Management Company's screening process and risk management function. The Fund's exclusion criteria include not investing in companies with operations in fossil fuels.

For more information about the Management Company's sustainability policy, exclusion criteria, and assessment methodology for sustainable investments, please visit: [Our sustainability approach at Asset Management | SEB](#)

How did this financial product perform compared to the reference benchmark?

The Fund did not use a benchmark index to achieve its promotion of environmental and social characteristics.

● How does the reference benchmark differ from a broad market index?

The Fund did not use a benchmark index to achieve its promotion of environmental and social characteristics.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The Fund did not use a benchmark index to achieve its promotion of environmental and social characteristics.

● How did this financial product perform compared with the reference benchmark?

The Fund did not use a benchmark index to achieve its promotion of environmental and social characteristics.

● How did this financial product perform compared with the broad market index?

The Fund did not use a benchmark index to achieve its promotion of environmental and social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
